Coal Department, a 1:10,000 general plan made on 6 June 1952 by the Designs Bureau of the Coal Industry at Berlin-Weissensee. The plan shows the open-cast brown coal workings at Muldenstein. These workings are designed ultimately to replace the open-cast brown coal workings near Golpa which are nearing exhaustion. The course of the coal railroad line to Greppin as shown on the plan has been slightly modified in its western section. This new railroad line is to serve the Zschornewitz and Elberth amount to 6.6 million tons in 1957. The total brown coal deposits in this distriction estimated at 168.3 million tons. The cost price for the mining of one ton of the coal is estimated at 2.94 DMO while the selling price will be about 3.05 DMO per ton. The total costs for the opening up of the Muldenstein brown coal deposits:

25X1A Comments

The Zschornewitz power station

was completely dismentised in 1945 and 1946, is scheduled to be equipped with six
